

British Fertility Society

Master Class in Reproductive Surgery

5th Jan 2012

Leeds institute for minimally invasive therapy (LIMIT), Leeds

Overview

Surgery for pelvic disease and tubal damage is widely practiced and can improve the fertility of women. However, with the increasing availability and success of IVF treatment, the opportunities for learning the skills required for surgery, including reversal of sterilisation operations are limited.

This masterclass delivered by renowned experts will impart valuable techniques that will improve your skills and ultimately patient's reproductive outcome. The course features interactive presentations, laparoscopic and simulated hands on skills training.

Why Attend?

- Update your knowledge the surgical options for women with tubal damage, endometriosis and fibroids
- Learn top tips from internationally recognised experts
- Undertake relevant simulated practical skills training such as laparoscopic suturing

Who should attend?

- Consultants with a special interest in gynaecological endoscopy or reproductive medicine
- Trainees developing an interest in reproductive medicine or laparoscopic surgery
- Gynaecologists in the independent sector wishing to update their skills

How to book

The single day course costs £300 and includes course documentation, equipment, lunch and refreshments. Places are strictly limited so book early to avoid disappointment. Registration details can be found on the BFS website at:

www.britishfertilitysociety.org.uk/meetings/

Course Organisers for the BFS
